

THERMOHYGROMETER DTH200

The Lufft DTH200 is our most accurate display to date. With an accuracy of $\pm 2\%rH$ it boasts a range of features no other display offers in a single package.

The DTH200 can be calibrated and adjusted by the user, in house. This can save you a lot of money as the DTH200 doesn't need to be sent away for costly calibrations. The DTH200 also features an acoustic alarm to warn you if humidity or temperature levels get too high or too low.

As well as displaying temperature and relative humidity, you can also view minimum and maximum readings, dewpoint, and absolute humidity to give you greater flexibility.
