

HANDHELDS

HygroPalm

- Accurate to +/- 1% rh
- Displays temperature / humidity / dew-point / wet bulb
- Probe can be calibrated by the user to certified standards
- Range of models available
- Two year manufacturers guarantee

The HygroPalm utilises the very best in digital technology with a unrivalled accuracy and stability. The probe can be calibrated on site using the specially designed chamber and salts traceable to SCS (Swiss Calibration Service) standards thus eliminating downtime and maximising the flexibility of this excellent quality model. The full range of models include options for multi point calibrations, interchangeable probes, sensors accurate to +/- 0.6% rh and a PC interface.

Testo 625

- Accurate to +/- 2.5% rh
- Displays temperature / humidity / dew-point / wet bulb
- Probe can be mounted on a cable or wireless module
- Min / max / hold facilities
- 2 year guaranteed long-term sensor stability

The Testo 625 offers a versatile handheld with a high quality, drift free sensor. The large display is easy to read and the probe can be removed from the unit and attached to either a cable or a radio module for checking hard to reach areas. The option of a Topsafe case which protects the unit against dirt and knocks whilst in use ensures safety when monitoring on site.

Testo 610

- Accurate to +/- 2.5% rh
- Displays temperature / humidity / dew-point / wet bulb
- Min / max / hold facilities
- Protective cap and case included
- Long term sensor stability

This model is part of the fantastic Testo Pocketline range and at just 119 mm tall is truly a pocket sized monitor. With the reliable Testo name and innovative design this small but fully functional monitor includes all the useful facilities you need including min / max readings, hold button and backlight. It comes with a protective cap and its own belt clip case making it truly portable.
