

STX Transmitter

The STX and SLTX transmitters use a high precision temperature and humidity sensor which is accurate to +/- 2% rh (+/- 0.3°C) and is integral to the transmitter thus allowing a smaller and neater outline.

Available in either a black or white enclosure the STX transmitter ensures discreet and reliable monitoring in display cases and public spaces as well as stores and archives.

Transmitter address and transmission intervals can be programmed by the user without the need for any further equipment and the units can be wall mounted or left freestanding.

If required the STX can be adapted to include a Lux and UV sensor (SLTX) and the display then shows a continuous flow of all four readings (temperature / humidity / lux / UV). This enables more cost efficient monitoring of all conditions in one compact unit.

The STX unit has a clear display which shows the current readings taken directly from the last transmission as well as having a low battery warning and a transmission indicator.

TECHNICAL DATA

DIMENSIONS	85mm x 70mm x 40mm aerial 160mm
WEIGHT	246g inc batteries
POWER SUPPLY	4 x AA batteries
BATTERY /LIFE	At least 2 years under normal conditions
FREQUENCY	434.075 MHz
RANGE	5km over open ground
TEMPERATURE ACCURACY	+/- 0.3°C
HUMIDITY ACCURACY	+/- 2% rh
